Mr. Joe Legare
Assistant Administrator for Environment and Stewardship
US Department of Energy-RFFO
10808 Highway 93, Unit A
Golden CO 80403-8200

RE: Present Landfill, western portion design

Dear Mr. Legare:

This is in response to review of various documents submitted by Kaiser-Hill reflecting changes in the design of the western portion of the Present Landfill. Changes were required because trash and soft spots were encountered in the field. In addition, it is our understanding that the alignment of the surface water drainage ditch may be revised.

These changes are sufficient to require revised drawings and specifications. The revised materials should include:

- a design showing the new surface configuration and surface water drainage system,
- a report of pilot testing for placement and compaction of the Rocky Flats alluvium subgrade material and cushion soil, including field test information, compaction procedures, and laboratory and field test results,
- a description of how the encountered trash will be relocated, including provision for daily cover which prevents run-off and airborne migration from the trash until reburial is complete.

The revised drawings and specifications should be submitted to EPA for approval prior to installation of the cushion layer.

Sincerely,

C. Mark Aguilar
C. Mark Aguilar
Rocky Flats Project Manager
